

## Carbon Fiber Twill Veneers

ACP's Carbon Fiber Twill Veneers are an outstanding decorative laminate with a deep, glossy, three dimensional finish. Our proprietary Autoclave curing process produces the most consistent and highest quality gloss carbon fiber sheets possible. Manufactured using 100% standard modulus carbon fiber fabric pre-impregnated with high quality epoxy resin, these sheets are cured at high temperatures and pressure to ensure a strong, rigid product that cannot be re-shaped after cured. Unlike a wet layup, our Autoclave curing process consistently yields flat, lightweight sheets with minimal voids, waves or buildups.

### Physical Properties

Thickness	.008" +/- .003"
Skin Material	2x2 Twill Carbon Prepreg
Skin Construction	Single Layer on outer surfaces
Core Material	N/A
Core Construction	N/A
Resin Matrix	Epoxy with Built in UV Inhibitor
Fiber Volume	60-65%
Finish	Gloss/Matte, Gloss/Adhesive

### Technical Properties

Tensile Strength	266 ksi
Tensile Modulus	18.3 msi
Tensile Strain	10,370
Compressive Strength	193 ksi
Compressive Modulus	16.5 msi
