

## White Peel Ply

Our White Peel Ply is a polyester release fabric coated with a specially designed release agent to prevent bonding with resin. Often used as the first barrier between the composite laminate and the rest of the vacuum bagging materials, peel plies are designed to allow resin to bleed through the material producing a textured, bondable finished surface while the release coating provides easy release from the cured laminate. The White Peel Ply contains less release than the Blue Peel Ply and can be used in conventional vacuum bagging, resin infusion and prepreg part manufacturing.

### Physical Properties

Thickness	.0055"
Material	Polyester
Color	White
Shelf Life	Indefinite
Weight	2.5 oz/yd <sup>2</sup>
Fabric Count (Warp x Fill)	120 x 60

### Technical Properties

Tensile Strength Warp	130 lbs.
Tensile Strength Fill	160 lbs.
pH	4.5-7.0
